Projects

Employee Management System
(*using React, Java SpringBoot, MySQL*)
2024/02 – present
The system will enable the HR department to track down and digitize employees' leaves, pay slips and grievance. The goal is to eliminate paper-based method.
I will be using React js for front-end, Java Spring Boot as my back-end, then MySQL for the database.

Estate Agent ☐
(*using MERN stack*)
2023/12 – present
I am building a web application using MERN, for the students to find accommodation easily in the neighborhood.
Web application uses MongoDB for a flexible and scalable data management. Express js to build back-end components, React js and Tailwind css to build the front-end components and Node js for back-end and front-end components to communicate

My Personal Portfolio ☐
(*using React*)
2023/05 – 2023/05
The goal was to intensify my React JS skill and create a profile for my personal projects.

Courses
